## Curriculum Map – Computer Science

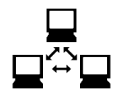

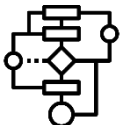

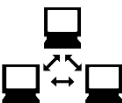

Computer Science Curriculum Map		
<b>St. Cuthbert's Curriculum Vision</b> 	<p>Here at St. Cuthbert's, our curriculum is rooted in our Catholic faith and the principles laid out in Catholic Social Teaching. Our goal is to help every child shine, feel valued, and make a positive mark in the world. With our core CARE values—Catholicity, Aspiration, Respect, and Excellence—guiding us, we aim to nurture each child's academic, social, emotional, and spiritual growth. We strive to foster an environment where every student feels secure, included, and supported, both inside the classroom and out.</p> <p><a href="#">Complete curriculum vision.docx</a></p>	
<b>Subject statement of intent</b>	<p>It is the aim of the department to enable students to develop skills and knowledge in Computer Science and Digital Technologies to prepare them for a future in a world where the use of this technology is fully embodied. Built on enthusiasm and a love of learning, it is the aim to encourage students to progress with this promising career path.</p> <p>It is the intent to develop problem solving skills through computational thinking which is at the core of the curriculum and embedded throughout units exploring algorithmic thinking and programming languages. Students will develop their ICT skills using a range of software applications and will develop a practical understanding of how to operate safely online. Students will explore what happens "under the hood", the communication of devices within networks and explore the wider issues of computing discussing ethical, legal and environmental issues.</p> <p>There will be no limitation placed on students with the programming skills the learners can develop, and they will be encouraged to undertake their own personal study and join further enrichment activity.</p>

## Curriculum Map – Computer Science

		access their future learning using general Microsoft software packages. <b>Why?</b> This sets the expectation of working within the department, using Microsoft packages and improves their digital literacy which would be a foundation skill for many future careers, and part of their communication whilst at SCRCHS.	By studying Visual Programming, this will allow students to spot links between Visual and Textual Programming which they will study as part of the NC in Year 8/9 and as part of the GCSE.	Students need a broad understanding of ethical issues and support catholic social teaching.			
	Theme	Exploring a Digital World (E-Safety)		Computer Systems	Mathematics and Logical Thinking

Students		<b>Previous Links:</b> Students have developed skills in computer literacy. Studying Computer Systems are statutory requirements at KS1/2.		<b>Previous Links:</b> Computer Programming in the Spring Term has given students opportunities to build logical thinking skills. <b>Future Links:</b>	

# St Cuthbert's RC High School

## Curriculum Map – Computer Science

		<p>will experience CS as a discrete subject for the first time in Year 7.</p> <p><b>Future Links:</b> Understanding of E-Safety will support students in wider areas of life, Ethics at KS4 Computer Science and within their Skills for Life lessons.</p> <p><b>Why?</b> It is important that students understand E-Safety as some students may be experiencing social media for the first time.</p>	<p><b>Future Links:</b> A secure platform for Computer Systems will support for learning in Year 8+ where knowledge is built upon.</p> <p><b>Why?</b> Components of Computer Systems knowledge are transferrable skills that can be applied across key stages and is a key part of GCSE Computer Science.</p>	<p>Logical Skills are essential to access programming elements to a GCSE in CS, they are also key to solving many aspects of wider life. Boolean Logic also forms a unit of the GCSE CS.</p> <p><b>Why?</b> Students need to establish a secure foundation of Computational Thinking skills to access Algorithm Design and Programming which is a key strand of Computer Science. Focus on Mathematics will not only support the skills required for this subject but also support the growth in attainment of Mathematics within the school.</p>
	<b>Assessment</b>	<p><a href="#">KS3 Assessment strategy - Computer Science.docx</a></p> <p>Students will sit a formative assessment at the end of each unit of work. Scores will be recorded centrally and will be used to inform future teaching. Students class teacher will mark these and provide individual and whole class feedback. Some of the formative assessments will have a practical element due to the nature of the subject. Students will sit three summative assessments (data drop points), the class teacher will again provide individual and whole class feedback, offering verbal improvements to the classroom. As part of all lessons at KS3, students will have a review task where they will review their learning from that lesson.</p>		
	<b>Homework</b>	<p>Students will be set a piece of homework per half term on the topic they have been studying. They will be able to take their exercise books home to be able to complete this homework. This homework will be used to assess students learning and understanding of their knowledge and skills and will provide a revision resource for formative and summative assessments.</p> <p><a href="#">Computer Science Homework Policy.docx</a></p>

## Curriculum Map – Computer Science

		Knowledge that is provided throughout computer systems will provide a further foundation for access at Year 9 and KS4 Computer Science curriculum. <b>Why?</b> Students need an in-depth knowledge of computer systems to access a large amount of learning at KS4.	Further Textual Programming will be learnt in Year 9 and at GCSE. This provides students with a platform to build their problem-solving skills and understanding of computational thinking. <b>Why?</b> Students need an in-depth understanding of programming. This is a large proportion of the GCSE and essential learning for Paper 2, all skills will be transferrable across KS4. This also supports learning at KS4 not having to deliver for the first time but to revisit taught content. If the teacher feels it necessary, there will be an option to use Small Basic for the first few lessons before moving onto Python Programming / continuing with visual programming.	have a foundation of learning in these units. <b>Why?</b> Students need a secure foundation of the structure and purpose of networks to develop their understanding in future learning about Networks at KS4.			
	Theme	HTML		Python Programming		Ethical Issues	
	Knowledge	<b>Substantive Knowledge</b> <ul style="list-style-type: none"><li>• Features of positive website design</li><li>• Knowledge of HTML tags</li></ul>	<b>Disciplinary Knowledge</b> <ul style="list-style-type: none"><li>• Creation of digital artefact to represent web design</li><li>• Creation of HTML website using HTML tags and design features</li></ul>	<b>Substantive Knowledge</b> <ul style="list-style-type: none"><li>• Selection Statements</li><li>• Iteration Statements (For and While)</li></ul>	<b>Disciplinary Knowledge</b> <ul style="list-style-type: none"><li>• Creation of programs in Textual Python</li><li>• Creation of programs in Python using the following techniques:</li></ul>	<b>Substantive Knowledge</b> <ul style="list-style-type: none"><li>• Spam and Phishing</li><li>• Types of Hackers</li><li>• Network Recovery Techniques</li><li>• Real and Fake Information</li></ul>	<b>Disciplinary Knowledge</b> <ul style="list-style-type: none"><li>• Application of Spam and Phishing to given examples.</li><li>• Examples of real-world hacking scenarios</li></ul>

	<ul style="list-style-type: none"><li>Sampling, Sample Rate/interval, Bit Depth</li><li>Compression</li></ul>				<ul style="list-style-type: none"><li>Producing lists (array)</li><li>Creation of functions and procedures</li><li>Utilising libraries.</li></ul>
Texts to be studied	<a href="#">Primary storage - Memory and storage - OCR - GCSE Computer Science Revision - OCR - BBC Bitesize</a> <a href="#">Units of data - Units and data representation - OCR - GCSE Computer Science Revision - OCR - BBC Bitesize</a>	<a href="#">Forms of attack - Network security - OCR - GCSE Computer Science Revision - OCR - BBC Bitesize</a>	<a href="#">Variables and constants - Programming fundamentals - OCR - GCSE Computer Science Revision - OCR - BBC Bitesize</a> <a href="#">The use of basic string manipulation - Programming techniques - OCR - GCSE Computer Science Revision - OCR - BBC Bitesize</a>		
Rationale	<p><b>Previous Links:</b> Students have learnt how data is represented in Y8 focusing on text, images and sound. They have also learnt how to convert numbers from binary to denary. In Y7 they are introduced to storage types and capacity (e.g. bytes) which is referenced throughout KS3.</p> <p><b>Future Links:</b> The concepts learnt can be transferred to Paper 2 in some instances, e.g. creating a program to complete data conversions. Knowledge of Binary will support their introduction to Logic Gates. Learning will be revisited within Year 11 and prior to their mocks to embed topics.</p>	<p><b>Previous Links:</b> Students have learnt the dangers associated with Networks.</p> <p><b>Future Links:</b> Learning will be revisited within Year 11 and prior to their mocks to embed topics. Network Security is included within A-Level Computer Science.</p> <p><b>Why?</b> Students experience a breadth of learning linked to Network Security to secure transferrable skills which will be revisited in preparation for their Computer Science examination. This will also be developed if students opt for Post 16 education in Computer Science. It is an essential part of the J277 Computer Science specification.</p>	<p><b>Previous Links:</b> Students were given a platform of understanding in Textual Based Programming in Y8/9 after focusing on Visual Based Programming in Y7.</p> <p><b>Future Links:</b> The understanding of programming will provide them with logical thinking skills to be applied in a wide range of context. It will also support them for the context of Translators and Robust Programming. Learning will be revisited within Y11 and prior to their mocks to embed topics. 		Both units are included within A-Level Computer Science. <b>Why?</b> Students experience a breadth of learning linked to Memory, Storage and Data Representation to secure transferrable skills which will be revisited in preparation for their Computer Science examination. This will also be developed if students opt for Post 16 education in Computer Science. It is an essential part of the J277 Computer Science specification.		Programming Techniques to secure transferrable skills which will be revisited in preparation for their Computer Science examination. This will also be developed if students opt for Post 16 education in Computer Science. It is an essential part of the J277 Computer Science specification.  Students will complete their Mock Examinations during this term; this will allow planning to be made for Y11 to ensure all learners receive the support required and plug the gaps in learning they may have.
	<b>Assessment</b>	<ul style="list-style-type: none"> <li>• There should be a large amount of exam question practice within the lessons, ideally each lesson after learning the content the students need, they should be shown how to link this to the exam to address the bigger picture.</li> <li>• At the end of each scheme of work, students will be expected to complete a formative assessment, this is formally marked by the teacher and a grade is given for this piece of work. Whole class feedback will be given to the students which links to misconceptions. All results will be centrally tracked which enables the teacher to deliver material to address any gaps the students may need.</li> <li>• At three points of the year, students will be expected to complete a summative assessment, for the first data drop this will be an average of the end of unit tests completed so far, with reasonable adjustments due to the difficulty of topics. For the second data drop an assessment will be produced which covers all knowledge and skills students have learnt so far. For the third data drop a formal mock will be completed within the hall which covers the entirety of Year 10 content.</li> </ul>		
	<b>Homework</b>	<p>Students should be set exam questions fortnightly, that supports the teacher timetable to be able to set, receive, mark and track homework. The teacher may decide to mark these individually or may choose to mark these within the lessons with the students to provide feedback. These exam questions should link to the students current learning or may be used to revisit past topics.</p> <p><a href="#">Computer Science Homework Policy.docx</a></p>		

### Year 11 Curriculum Map

# St Cuthbert's RC High School

## Curriculum Map – Computer Science

YEAR 11		AUTUMN		SPRING		SUMMER	
Year 11	Theme	Producing Robust Programs		System Software		Revision	
	Knowledge	<b>Substantive Knowledge</b> <ul style="list-style-type: none"> <li>Defensive Design</li> <li>Input validation</li> <li>Maintainability</li> <li>Purpose of Testing</li> <li>Types of Testing</li> <li>Syntax and Logic Errors</li> <li>Test Data</li> <li>Refining Algorithms</li> </ul>	<b>Disciplinary Knowledge</b> <ul style="list-style-type: none"> <li>Choosing and applying test data</li> <li>Producing test tables</li> <li>Finding and correcting syntax and logic errors</li> </ul>	<b>Substantive Knowledge</b> <ul style="list-style-type: none"> <li>Functionality of Operating Systems</li> <li>User Interfaces</li> <li>Memory and Peripheral Management</li> <li>User and File Management</li> <li>Utility Software</li> <li>Encryption</li> <li>Defragmentation</li> <li>Compression</li> </ul>	<b>Disciplinary Knowledge</b> <ul style="list-style-type: none"> <li>Application of given example to a function of the operating system.</li> <li>Application of scenario e.g. defragmentation.</li> </ul>	<b>Substantive Knowledge</b> <ul style="list-style-type: none"> <li>Retrieval of knowledge from all units.</li> </ul>	<b>Disciplinary Knowledge</b> <ul style="list-style-type: none"> <li>Application of learning to given scenarios for all topics.</li> </ul>
	Texts to be studied	<a href="#">Defensive design considerations - Producing robust programs - OCR - GCSE Computer Science Revision - OCR - BBC Bitesize</a>		<a href="#">Systems software - Systems software - OCR - GCSE Computer Science Revision - OCR - BBC Bitesize</a>		<b>Knowledge Organisers</b> <b>Document "Read/Listen/Watch"</b> <b>CGP Textbook</b>	
	Rationale	<b>Previous Links:</b> Students should revisit the learning from Year 10 using a sequence of Mastery Sessions in Lessons due to the break of the Summer Holidays. Students have some experience of robust programming from their experience with Textual Programming, the knowledge will be familiar and transferrable but using more detailed terminology.		<b>Previous Links:</b> Students in Y9 have started to explore the purpose of an Operating System, and have looked at the range of User Interfaces, across KS3 the difference between application software and system software is referenced. <b>Future Links:</b> Learning will be revisited within Year 11 and prior to their mocks to embed topics. Unit is included within A-Level Computer Science.		<b>Previous Links:</b> Students will be revisiting all taught aspects of KS4 Computer Science. <b>Future Links:</b> Units are included within A-Level Computer Science. <b>Why?</b> Revision is essential at this stage of the curriculum to provide the students with the support they require before sitting the final

		Science examination. This will also be developed if students opt for Post 16 education in Computer Science. It is an essential part of the J277 Computer Science specification.		
	<b>Assessment</b>	<ul style="list-style-type: none"> <li>There should be a large amount of exam question practice within the lessons, ideally each lesson after learning the content the students need, they should be shown how to link this to the exam to address the bigger picture.</li> <li>At the end of each scheme of work, students will be expected to complete a formative assessment, this is formally marked by the teacher and a grade is given for this piece of work. Whole class feedback will be given to the students which links to misconceptions. All results will be centrally tracked which enables the teacher to deliver material to address any gaps the students may need.</li> <li>At two points of the year, students will be expected to complete a summative assessment, for the first data drop this will be a mock exam of two papers, paper two will be given full (the more challenging paper), paper one will be given with the omission of two topics. This then gives a realistic grade as whilst there is content missing the more challenging content has been assessed. The second data drop will then consist of paper one and paper two with the grade boundaries from that year being used.</li> </ul>		
	<b>Homework</b>	<p>Students should be set exam questions fortnightly, that supports the teacher timetable to be able to set, receive, mark and track homework. The teacher may decide to mark these individually or may choose to mark these within the lessons with the students to provide feedback. These exam questions should link to the students current learning or may be used to revisit past topics.</p> <p>This may be adapted to suitable revision related to the individual class as time progresses.</p> <p><a href="#">Computer Science Homework Policy.docx</a></p>		

### Catholic Social Teaching

In all areas of the curriculum careers are referenced. (Option for the Poor and Vulnerable)

#### Year 7:

Students develop Email Skills (Dignity of the human person), Students look at their digital footprints, cyberbullying, social networks and video games (Dignity of the human person, Dignity of Work, Rights and Responsibilities and Solidarity and the Common Good), Students look at Robotics / AI, Laws, Health and Safety (Dignity of the Human Person, Dignity of Work and

### Preparing for Life in Modern Britain

Students are encouraged in all aspects of the classroom to have mutual respect for others, particularly when giving their viewpoint and answers. Teachers should be respectful to their answers and not discourage engagement.

#### Year 7:

Students are encouraged to share their viewpoints and have detailed discussion particularly within the E-Safety unit of work (democracy). Discussion of other beliefs and tolerance of

# St Cuthbert's RC High School

## Curriculum Map – Computer Science

Solidarity and the Common Good) Students also explore environmental issues (Stewardship).

### Year 8:

Students study topics including Spam, Phishing, Hackers, Network Recovery and Real / Fake Information (Dignity of the Human Person, Dignity of Work and Solidarity of the Common Good)

### Year 9:

Students explore video / photo editing which links to the Copyright Act (Rights and Responsibilities and Dignity of the Human Person)

### Year 10:

Students develop understanding of Network Security Threats (Dignity of the Human Person and Rights and Responsibilities).

### Year 11:

Students complete a unit of work on Ethics, Legal, Cultural and Environmental Issues (Stewardship, Rights and Responsibilities, Solidarity and the Common Good and Dignity of the Human Person)

cultures is demonstrated within the video games lesson, how there may be differences in ethical views. Within the Ethics unit, students explore different laws (rule of law) in relation to technology.

### Year 8:

Students are encouraged to share their viewpoints and have detailed discussion particularly within Term 3 (democracy). Discussion of other beliefs and tolerance of other cultures is demonstrated within the ethics unit.

### Year 9:

Mutual respect must be established in the classroom to ensure that no app design is deemed offensive and everything included within the app design is age range appropriate.

### Year 11:

Students discuss their viewpoints in relation to legal, cultural, environmental and ethical issues.

## Careers

Careers have been references for each individual unit at KS3 and KS4 for reference within students learning. Several activities will also link to careers directly and areas related to the field. Whole School Events such as Careers Day/Week will also play a factor into the focus that is put into this section.

All KS4 Lessons have example careers within the Teacher PowerPoint:

## Skills for Life

### Year 7:

ICT Skills within HT1 is essential for building ICT competency for all areas of life in leisure and in work. Many E-Safety topics cross over with the curriculum in Skills for Life due to social media and Technology being such a huge impact in everyday life. Programming provides students with logical thinking and application skills.

### Year 8:

Many topics discussed within the ethics unit of work crosses over with Skills for Life. Programming provides students with logical thinking and application skills.

### Year 9:

ICT Skills is essential for building ICT competency for all areas of life in leisure and in work. Programming provides students with logical thinking and application skills.

KS4:

Students are gaining logical thinking and application skills through all units of work. Students are also gaining practice use of ICT applications using Microsoft Packages which they will be able to apply to future careers and job roles.

**Cultural Capital and Enrichment Opportunities**

KS3

Investigate 2025/2026 of a trip related to technology. In the past students have completed trips to Universities to complete technology exploration days / gaming days, also had visitors into school from various companies to explore these niches.

Coding Club to run after school to promote love of programming / robotics.

KS4:

Investigate 2025/2026 of a trip related to technology. E.g. Bletchley Park or a Gaming Course at University. Explore this year a revision course towards the end of the Year with other schools.

Year 7:

Discussion of topics in E-Safety/Ethics allow students to explore different viewpoints and cultures. Students complete a PowerPoint "about me", which enables students to start talking about their lifestyle and interest to other students in the group. Programming allows students to embrace their interests, having free scope in the game design element they can apply it to their culture.

Year 8:

Programming allows students to embrace their interests, they have further freedom around the web design and creating small programs which are influenced by their current interests and hobbies, e.g. typing tests. Students explore hackers in Ethical issues to show the different skill sets and intentions that hackers may have.

Year 9:

Programming allows students to embrace their interests; they have further freedom when creating programs which are influenced by their current interests and hobbies. Flowchart design is centred around general household activities. Exploring further ICT software packages allows students to gain ideas into how lots of roles incorporate together and future hobbies / careers.

KS4:

## St Cuthbert's RC High School

### Curriculum Map – Computer Science

Programming allows some students to embrace their interests as they may engage with this at home. Scenarios will always be relatable so students can see how this impacts their day-to-day life.
